System Requirements Engineer for IBS (Iasi)

With sales of €32.7 billion in 2012, Continental is among the leading automotive suppliers worldwide. As a supplier of brake systems, systems and components for powertrains and chassis, instrumentation, infotainment solutions, vehicle electronics, tires, and technical elastomers, Continental contributes to enhanced driving safety and global climate protection. Continental is also an expert partner in networked automobile communication. Continental currently has approximately 170,000 employees in 46 countries.

The Chassis & Safety Division develops and produces electronic and hydraulic brake and chassis control systems, sensors, driver assistance systems, airbag electronics and - sensorics, washer systems and electronic air suspension systems. Its core competence is the integration of active and passive driving safety into ContiGuard®.

The Powertrain Division integrates innovative and efficient system solutions for vehicle powertrains. The comprehensive range of products includes gasoline and diesel injection systems, engine management, transmission control, including sensors and actuators, as well as fuel-supply systems and components and systems for hybrid and electric drives.

Information management is at the very heart of the Interior Division, which provides a range of products that includes instrument clusters and multifunctional displays, control units, electronic car-entry systems, tire-monitoring systems, radios, multimedia and navigation systems, climate control systems, telematics solutions and cockpit modules and systems.

Currently the Automotive locations in Romania have about 5.000 employees working in R&D Centers & Plants and are still growing.

Software Developer-Powertrain Engine Systems Iasi

Job Description

More power, less fuel consumption: the Engine Systems Business Unit provides innovative engine management systems and fuel components for a cleaner environment. The ES product portfolio contains innovative systems and components for diesel and gasoline injection, controller solutions for commercial vehicles, turbocharger and exhaust gas aftertreatment technologies.

Our innovative system solutions are making gasoline & diesel engines more reliable, powerful and efficient. We are pursuing several strategies in parallel and are in an excellent position to meet our customers' demands with our innovative port injection, solenoid and piezo direct injection systems.

As a member of our ES software development team you will participate in the implementation of the software that is flashed on the Engine Control Unit. The Engine Control Unit together with the software developed by us ensures a more affordable mobility and a cleaner environment.

As a Software Developer you will:

- analyze and understand customer requirements
- generate software solutions
- code, then test on PC and on the microcontroller target system
- deliver the solution to the project for integration
- develop your technical skills
- deal with the latest automotive technologies and products that haven't been released on the market yet
- work on worldwide projects with colleagues that have different cultural backgrounds

A mentor will support you to stepwise take over own responsibility after an initial training phase which will familiarize you with our products, tools, processes and organization.

Job Requirements

- University Degree in a relevant field (Computer Science, Electronics and Telecommunication, Informatics etc.)
- Good programming skills in C embedded
- Microcontrollers knowledge is a plus
- Embedded systems knowledge and experience in the automotive industry is a plus
- Fluency in English
- Soft skills: result orientation, good communication skills, ability to analyze and organize, team player

Benefits

- Integration Program in a Professional, Young & Dynamic Team
- Competitive Salaries & Benefits
- Professional Development Opportunities
- Health & Wellness
- Stability
- International Work Environment & Traveling Opportunities
- Relocation Package for non-Iasi Residents

The Function Developer position is open in the newly formed Systems & Technology Group within Chassis and Safety Division in Iasi.

Within the Systems and Technology group, the tomorrow's products of Chassis and Safety Division are foreseen and developed with high degree of innovation. In Systems and Technology Group are developed systems that are contributing to changing the way the cars are driven, making the step from a driver dependant car to a fully automated car. Also, in System and Technology you will have to opportunity to release your creativity and imagine the future products of the Chassis and Safety Division.

As a Function Developer in our group your responsibilities will be:

- Development of functional concepts and specifications
- Development of algorithms for embedded software using Matlab/Simulink
- Solving design and functional anomalies and ensuring the functional safety of the released product
- Regularly report the status of development to your direct manager;
- Cooperate within our international development teams and synchronize with our internal customers. If you are a student, the starting date is open to discussion based on your needs and the project schedule.

Job Requirements

- University degree in a relevant field (i.e. Telecommunication, Automation and Computer science, Electronics, Electro technique, Mecatronics ...)
- Knowledge of embedded systems and C programming
- Knowledge about MATLAB/Simulink
- Basic knowledge of electronics (for using measurement equipment) and physics is appreciated
- Capability to analyze technical problems
- Design techniques and methods
- Good writing, reading and speaking English skills

Benefits

- Integration Program in a professional, young & dynamic team
- Competitive Salaries (based on performance) & Benefits
- Health & Wellness (Private Health and Life Insurance, Sport activities etc.)
- Professional Development Opportunities (in Technical and Managerial Area)
- Stability
- International Work Environment & Traveling Opportunities
- Relocation Package for non-Iasi Residents

Software Developer for S&T (Iasi)

With sales of €32.7 billion in 2012, Continental is among the leading automotive suppliers worldwide. As a supplier of brake systems, systems and components for powertrains and chassis, instrumentation, infotainment solutions, vehicle electronics, tires, and technical elastomers, Continental contributes to enhanced driving safety and global climate protection. Continental is also an expert partner in networked automobile communication. Continental currently has approximately 170,000 employees in 46 countries.

The Chassis & Safety Division develops and produces electronic and hydraulic brake and chassis control systems, sensors, driver assistance systems, airbag electronics and -sensorics, washer systems and electronic air suspension systems. Its core competence is the integration of active and passive driving safety into ContiGuard®.

The Powertrain Division integrates innovative and efficient system solutions for vehicle powertrains. The comprehensive range of products includes gasoline and diesel injection systems, engine management, transmission control, including sensors and actuators, as well as fuel-supply systems and components and systems for hybrid and electric drives.

Information management is at the very heart of the Interior Division, which provides a range of products that includes instrument clusters and multifunctional displays, control units, electronic car-entry systems, tire-monitoring systems, radios, multimedia and navigation systems, climate control systems, telematics solutions and cockpit modules and systems. Currently the Automotive locations in Romania have about 5.000 employees working in R&D Centers & Plants and are still growing.

With sales of €33.3 billion in 2013, Continental is among the leading automotive suppliers worldwide. As a supplier of brake systems, systems and components for powertrains and chassis, instrumentation, infotainment solutions, vehicle electronics, tires and technical elastomers, Continental contributes to enhanced driving safety and global climate protection. Continental is also an expert partner in networked automobile communication. Continental currently has more than 178,000 employees in 49 countries.

Software Developer for S&T (Iasi)

Job Description

The Software Developer position is open in the newly formed Systems & Technology Group within Chassis and Safety Division in Iasi. If you want to contribute to the development of the Tomorrow's Car, you are applying to the right job. Within the Systems and Technology group, the tomorrow's products of Chassis and Safety Division are foreseen and developed with high degree of innovation.

In Systems and Technology Group are developed systems that are contributing to changing the way the cars are driven, making the step from a driver dependant car to a fully automated car. Also, in System and Technology you will have to opportunity to release your creativity and imagine the future products of the Chassis and Safety Division.

As a Software Developer in our group, you will:

- develop embedded software in interdisciplinary project teams at international level;
- follow company standards applicable in all SW development phases (requirements, specifications, code, tests, validations);
- regularly report the status of development to your direct manager;
- cooperate within our international development teams and synchronize with our internal customers.

Most of the software development for this specific position is done in ANSI C or C++. Knowledge of Matlab/Simulink is appreciated, but is not a must.

A mentor will support you to stepwise take over own responsibility after an initial training phase which will familiarize you with our products, tools, processes and organization.

If you are a student, the starting date is flexible.

Job Requirements

- University degree in a relevant field (i.e. Automatic Control and Computer Science, Electronics and Telecommunication, Informatics, etc.) ;
- Good programming skills in one of the following languages: ANSI C, C++.
- Basic knowledge of electronics (for using measurement equipment) and embedded systems is appreciated;
- Creative, open-minded, flexible;
- Good writing, reading and speaking English skills.

Benefits

- Competitive Salaries (based on performance) & Benefits;
- Health & Wellness (Life Assurance, Private Health and Dental Insurance, Sport activities etc.);
- Integration Program in a professional, young & dynamic team;
- A mentor for the integration period
- Professional Development Opportunities (in Technical and Managerial Area);
- Stability;
- International Work Environment & Traveling Opportunities;
- Relocation Package for non-Iasi Residents.

Software Test Engineer for C&S Iasi

Job Description

The Chassis & Safety Division in Iasi offers the possibility to contribute to the development of exciting and various technologies. In the Steering Segment, modern Electric Power Steering systems are developed, making the driving experience for the driver safer; and at the same time, reducing the fuel consumption and CO2 emissions. The Vehicle Dynamics Business Unit provides highly advanced braking technology for all vehicle types, usable in vehicle ranging from small cars right to transportation vehicles. Besides this, products that integrate electronic chassis components and safety systems are developed, as part of ContiGuard®. Finally, within the Systems and Technology group, the tomorrow's products of Chassis and Safety are foreseen and developed with high degree of innovation.

As an Embedded Software Tester your responsibilities will be to:

- Analyze requirements and develop test plans for the developed software;
- Be part of development team, participating to reviews and evaluations;
- Perform testing of C embedded software;
- Test and validate the software on the real hardware;
- Perform measurements and assess the results of the measurements;
- Document the test results and provide reports to project management;
- Create automated solutions for testing;
- Cooperate with an international development team and customers;

A mentor will support you to stepwise take over own responsibility after an initial training phase which will familiarize you with our products, tools, processes and organization.

Job Requirements

- University degree in a relevant field (i.e. Automation and Computer science, Electronics, Electro technique, Mecatronics);
- Knowledge about C programming;
- Basic Knowledge in microcontrollers, embedded systems and electronic circuit theory;
- Knowledge/ Experience in testing is an advantage;
- Good writing, reading and speaking English skills.

Benefits

- Integration Program in a Professional, Young & Dynamic Team;
- Competitive Salaries & Benefits;
- Professional Development Opportunities;
- Health & Wellness;
- Stability;
- International Work Environment & Traveling Opportunities;
- Relocation Package for non-Iasi Residents.

Software Quality Engineer for I BS (Iasi)

Job Description

You will represent the quality organization inside the software project development team.

You will be responsible to check the adherence to software processes inside the project, including releasing of software deliveries to internal and external customers. You will define together with the Software Technical Leader all the software quality activities to be performed inside the project. You will coach the software development team related to the methods to be applied to achieve the quality expected by the customer.

You will be the main support for the Software Technical Leader in deploying the process related activities inside your project.

In addition, you will be encouraged to find ideas to improve the software development process implemented inside the project in order to optimize our products' quality.

We want you integrated in our team as soon as possible. Therefore, one of us is your mentor and will guide you to get familiar with our products, tools, processes and organization. We, as Quality Management Team, will support you in taking over own responsibilities after initial training phase.

Job Requirements

Mandatory

- ◊ BS in computer science, electric/electronic engineering
- ◊ 2-3 years experience as software developer / tester
- ◊ Software development methodologies (V-cycle, Waterfall model, SCRUM)
- ◊ Initiative, dedication, attention to detail
- ◊ Good command of English (speaking & writing)

Desirable

- ◊ Embedded systems fundamentals
- ◊ Advanced knowledge of C programming language
- ◊ Ability to work under pressure

Would be a plus

- ◊ Quality standards: ISO 9001, ISO/TS 16949, SPICE
- ◊ Test techniques applied in development
- ◊ Quality methods and tools (Root cause analysis, 5 Why, Review moderation)
- ◊ German speaker

Software Developer for Motor Control (Iasi)

With sales of €32.7 billion in 2012, Continental is among the leading automotive suppliers worldwide. As a supplier of brake systems, systems and components for powertrains and chassis, instrumentation, infotainment solutions, vehicle electronics, tires, and technical elastomers, Continental contributes to enhanced driving safety and global climate protection. Continental is also an expert partner in networked automobile communication. Continental currently has approximately 170,000 employees in 46 countries.

The Chassis & Safety Division develops and produces electronic and hydraulic brake and chassis control systems, sensors, driver assistance systems, airbag electronics and - sensorics, washer systems and electronic air suspension systems. Its core competence is the integration of active and passive driving safety into ContiGuard®.

The Powertrain Division integrates innovative and efficient system solutions for vehicle powertrains. The comprehensive range of products includes gasoline and diesel injection systems, engine management, transmission control, including sensors and actuators, as well as fuel-supply systems and components and systems for hybrid and electric drives.

Information management is at the very heart of the Interior Division, which provides a range of products that includes instrument clusters and multifunctional displays, control units, electronic car-entry systems, tire-monitoring systems, radios, multimedia and navigation systems, climate control systems, telematics solutions and cockpit modules and systems. Currently the Automotive locations in Romania have about 5.000 employees working in R&D Centers & Plants and are still growing.

Software Developer for Motor Control (Iasi)

Job Description

The Software Developer position is open in the Chassis and Safety Division in Iasi.

The Chassis & Safety Division in Iasi offers the possibility to contribute to the development of exciting and various technologies. Modern Electric Power Steering systems are developed in Steering Segment, making the driving experience for the driver safer, and at the same time, reducing the fuel consumption and CO2 emissions. The Vehicle Dynamics Business Unit provides highly advanced braking technology for all vehicle types, usable in vehicle ranging from small cars right to transportation vehicles. Besides this, products that integrate electronic chassis components and safety systems are developed, as part of ContiGuard®. Finally, within the Systems and Technology group, the tomorrow's products of Chassis and Safety are foreseen and developed with high degree of innovation.

As a Software Developer in our Motor Control team, you will:

- › bring your own ideas and contribution to the development of innovative brake systems;
- › develop algorithms for motor control in safety relevant products;
- › develop embedded software in interdisciplinary project teams at international level;
- › follow company standards applicable in all SW development phases (requirements, specifications, code, tests, validations);
- › cooperate with international development teams and synchronize with our internal customers.

Most of the software development for this specific position is done in ANSI C. Knowledge of Matlab/Simulink is appreciated, but is not a must. A mentor will support you to stepwise take over own responsibility after an initial training phase which will familiarize you with our products, tools, processes and organization.

Apply now: Let your ideas shape the future.

www.romania.careers-continental.com

Job Requirements

- › University degree in a relevant field (i.e. Automatic Control and Computer Science, Electronics and Telecommunication, etc.).
- › Programming skills in one of the following language: ANSI C, Matlab.
- › Knowledge of Simulink modeling is highly appreciated.
- › Knowledge of control engineering and/or motor control are highly appreciated.
- › Knowledge of electronics (for using measurement equipment) and embedded systems is appreciated.
- › Good writing, reading and speaking English skills.

What we offer

- › Integration Program in a Professional, Young & Dynamic Team;
- › Competitive Salaries & Benefits;
- › Professional Development Opportunities;
- › Health & Wellness;
- › Stability;
- › International Work Environment & Traveling Opportunities;
- › Relocation Package for non-Iasi Residents.

5 Electro-mechanical technicians/engineers

better work, better life

Descrierea companiei

Adecco si-a inceput activitatea in Romania in anul 2000, in contextul unei societati aflate in tranzitie si care incerca sa redefineasca abordarea notiunii de "personal". Incepand cu acel moment, Adecco a contribuit in acest sens cu expertiza internationala care a facilitat evolutia de la „forta de munca” la „personal”. Astfel, Adecco a dat dovada de flexibilitate si deschidere fata de specificul si cerintele pietei nationale, fara a diminua insa importanta calitatii serviciilor oferite. Adecco nu si-a abandonat misiunea nici la 14 ani de la patrunderea pe piata muncii din Romania, anticipand nevoile clientilor sai si lucrând numai la cele mai inalte standarde pentru a oferi solutii personalizate si performante. ADECCO ROMANIA HEADQUARTERS - Str. Costache Negri, Nr. 1-5, Sector 5 Etaj 7, Cladirea Opera Center Bucuresti, Romania Telephone: 004 – 021 300 35 44 Fax: 004 – 021 300 35 45 E-mail for general information:office.romania@adecco.com

ADECCO IASI - Str. Sfantul Lazar nr. 26, Bl. K5, Parter, Ap.2, Iasi, Romania T: 004 – 0213 05 36 10 F: 004 – 0232 20 61 20

Candidatul ideal

You are:

- Strong knowledge in electro-mechanics
- A fresh graduate of university studies (textile or mechanics)
- Interested in new technologies
- Open-minded, eager to learn and able to work well in a team
- Willing to travel around the Europe for at least 3 years
- Fluent English is a must

Descrierea jobului

Are you an electro mechanical skilled person?

Do you speak English fluently?

Do you want to travel for at least 3 years around Europe?

Adecco Permanent Placement is recruiting for its client, a multinational company in Sibiu, 5 electro-mechanical skilled people.

Your job:

You will be a Production Trainee in our clients' plant. First months you will be

Inginer electronist / automatist

Descrierea companiei

S.C. CONEX DISTRIBUTION S.A. a fost înființată în 2003 pentru a susține activitatea de distribuție a companiilor din cadrul Grupului care au ca domeniu de activitate producția pentru piața auto. Datorită extinsei rețele de vânzare pe această piață, Conex Distribution și-a dezvoltat considerabil portofoliul de produse. Astfel, începutul anului 2004 a reprezentat cel mai bun moment pentru a intra pe piața națională cu o gamă variată de produse destinate autovehiculelor. În prezent colaborez cu cei mai importanți producători și importatori români de piese și accesorii auto, oferta fiind completată și de furnizorii străini cu care s-au stabilit deja parteneriatele.
